Subject: RE: batch run current PPA tool

Thanks for clarifying, and knowing the subset is useful. I'll put this on my list to complete by the week after 7/4 and let you know if any other questions arise.

Cheers,

Good questions-

Right, each 'project' for the batch would be a polygon- the Green Zone. We are working to get the updated geographies, but there are a few still outstanding.

And definitely just a subset of the indicators: the 'accessibility to services' is the key one. Plus the LU diversity, block density, bike coverage, transit density and access to jobs if possible. But nothing in Congestion, Safety, Freight, SGR, etc.

Hi Garrett,

I believe I could get batch results to you by the week after 7/4, assuming I was provided the input shapefile of green zones/projects.

But for the batch processing, do you want each “project” in the batch to be a green zone polygon? I.e., not a line? If so, I’ll need to check a bit deeper into the scripts and give a revised timeline for completion.

Also, are there some specific metrics you want for each geography? Asking because if you only want a handful of the dozens of metrics PPA creates, it may save me time, especially if we’re trying to adapt to process polygons instead of lines.

Thanks,

Hey,

I was under assumption that doing a batch run in the current PPA tool not overly onerous.
Is that correct?

Basically, we have new Green Zone geographies being put together, plus we want to bring in the 'accessibility to service's metric from PPA to the Green Zone map.

Would you have time in early July to do a batch run and get the PPA results on the Green Zone geographies? Would want this the week following the fourth (to give more time to finalize the Green Zones). I looked at your calendar, looked like you are working that week. Wanted to see if you were, and if so, if you would have time for the batch run.

For context, this would be used for the mini program kicking off mid July (\$3m of the \$34m GMG), which has a shorter app and fewer data requirements.

Then we still have the goal of having a custom GMG report in the new Vertgis platform for the August 16 rollout of the two main GMG categories (\$31m of the \$34m)
